

# Environmental Radiation Monitoring in Chernobyl Exclusion Zone

*Yuliya Balashevskaya*

*Central analytical laboratory*

*SSE Ecocentre*

*Chernobyl, Ukraine*

# Three Questions We Must Answer Today

**WHAT**

**HOW** **to monitor?**

**WHY**

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# 26/04 1986

The Shelter

New Safe Confinement (NSC)

**Chernobyl accident:**  
Technogenic  
Humanitarian  
Environmental

**Consequences:**  
Social  
Economic  
Political

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

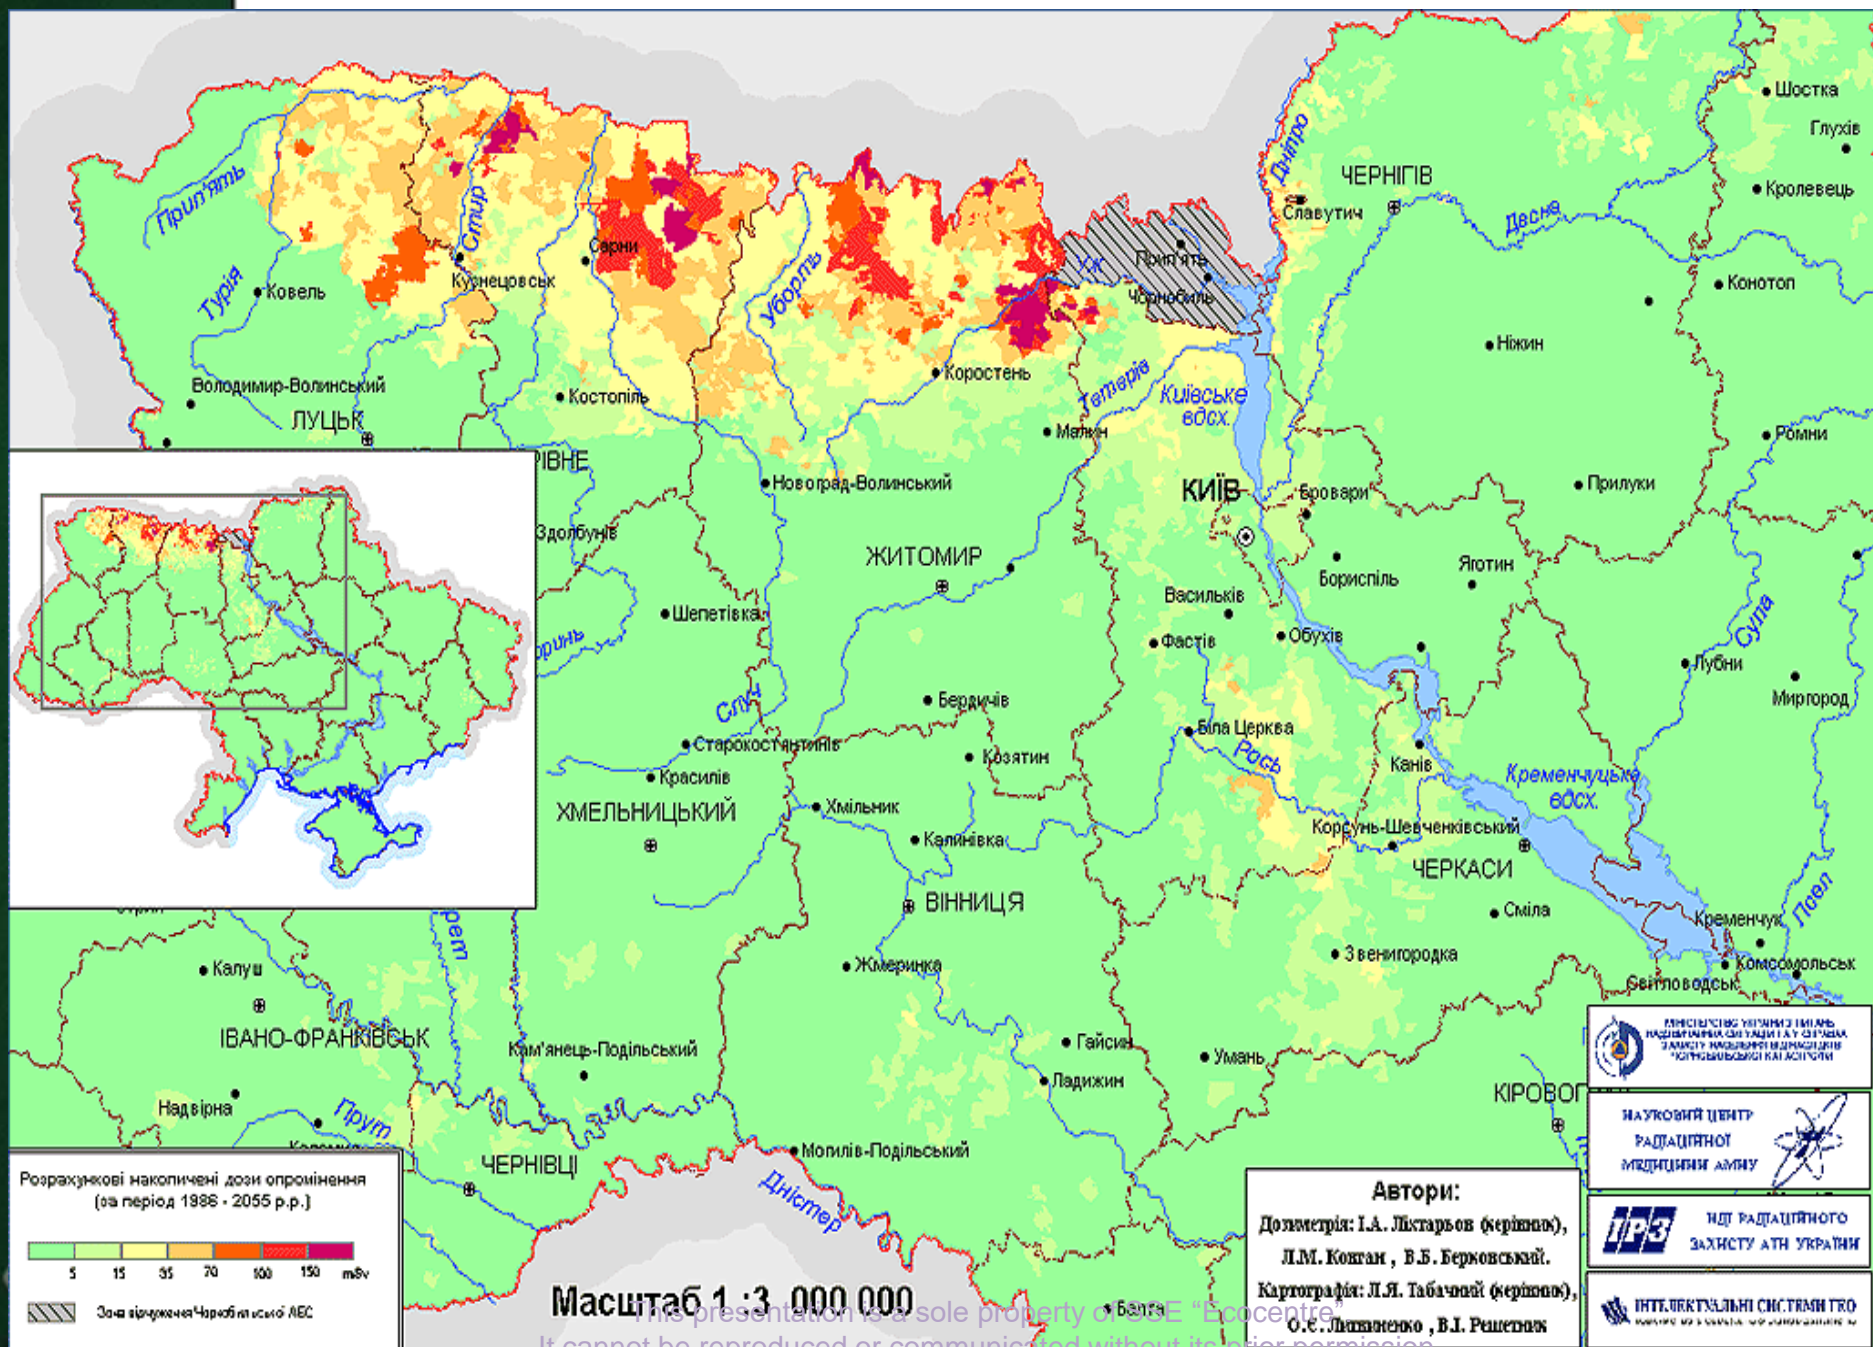

# WHAT TO MONITOR?

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# Chernobyl Exclusion Zone today

**Tokyo: 2188 sq. km**

**Luxembourg: 2586 sq. km**

# Chernobyl Exclusion Zone today

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# Chernobyl Exclusion Zone today

Barrier function of ChEZ is realized through...

**Natural objects**

Geological environment,  
vegetation cover

**Artificial objects**

RAW  
storage/disposal  
facilities

**Artificial processes**

Control of technogenic  
transportation of RN, water  
protection measures etc.

# The town of Chernobyl

ヨモギ

<http://www.nature.com/>

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# Self-settlers (returnees)

## Документ № 98

Довідка 3-го відділу 6-го Управління КДБ УРСР  
про недовіду у забезпеченні охорони 30-ти км зони  
Чорнобильської АЕС.  
14 листопада 1987 р.

## СПРАВКА \*

о недостатках в обеспечении охраны  
30-ти километровой зоны ЧАЭС и фактах самовольного возвращения  
граждан в эвакуированные районы

**KGB note #98 of 14/11/1987**

1038 people returned to ChEZ  
(14 villages):

- Inability to accept new lifestyle;
- Concerns about their property;
- Lack of understanding of radioactivity and consequences of exposure to radiation;
- Lack of regulation.

## Residence in ChEZ is considered **illegal** since 1991

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# Self-settlers (returnees)

0  
1988 1992

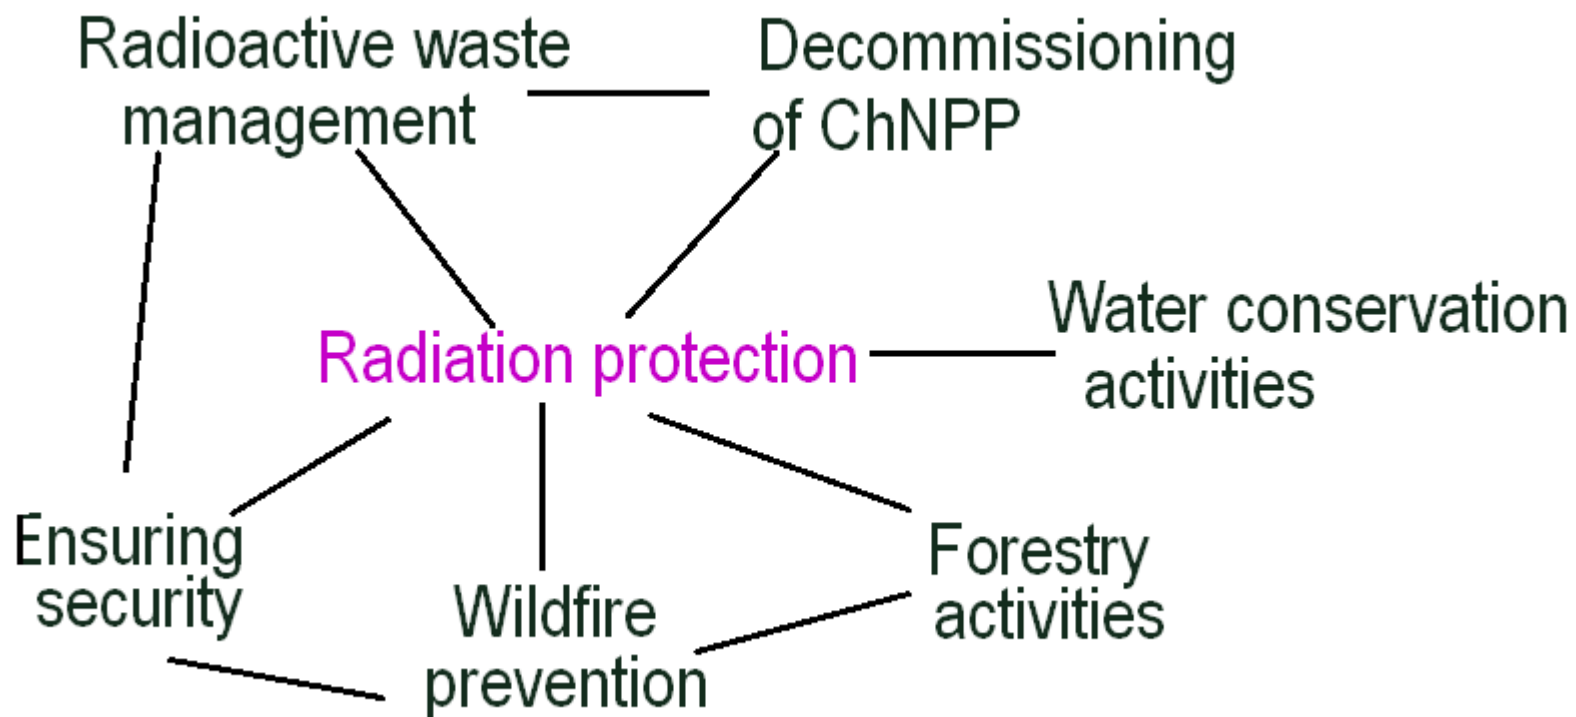

<http://chornobyl.in.ua/>

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# Activities in ChEZ

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# HOW TO MONITOR?

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# System establishing

Radiation Environmental Monitoring = data  
collecting + data processing + data transfer +  
long-term storage and analysis of data +  
prognosing + making recommendations for  
managerial decision-making

# System establishing

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# System establishing

This presentation is a sole property of SSE "Ecocentre".  
 It cannot be reproduced or communicated without its prior permission.

# Monitoring Schedule

A document which determines:

- The objects covered under REM;
- Places of sampling/field measurements;
- Scope and frequency of REM;
- Types of measurements/parameters;
- Sampling & measurement methodologies

| Object | No. of samples (per year) | No. of measurements |                  |                   |                   |       |
|--------|---------------------------|---------------------|------------------|-------------------|-------------------|-------|
|        |                           | $^{137}\text{Cs}$   | $^{90}\text{Sr}$ | $\Sigma\text{Pu}$ | $^{241}\text{Am}$ | TOTAL |

### Number of measurements per year

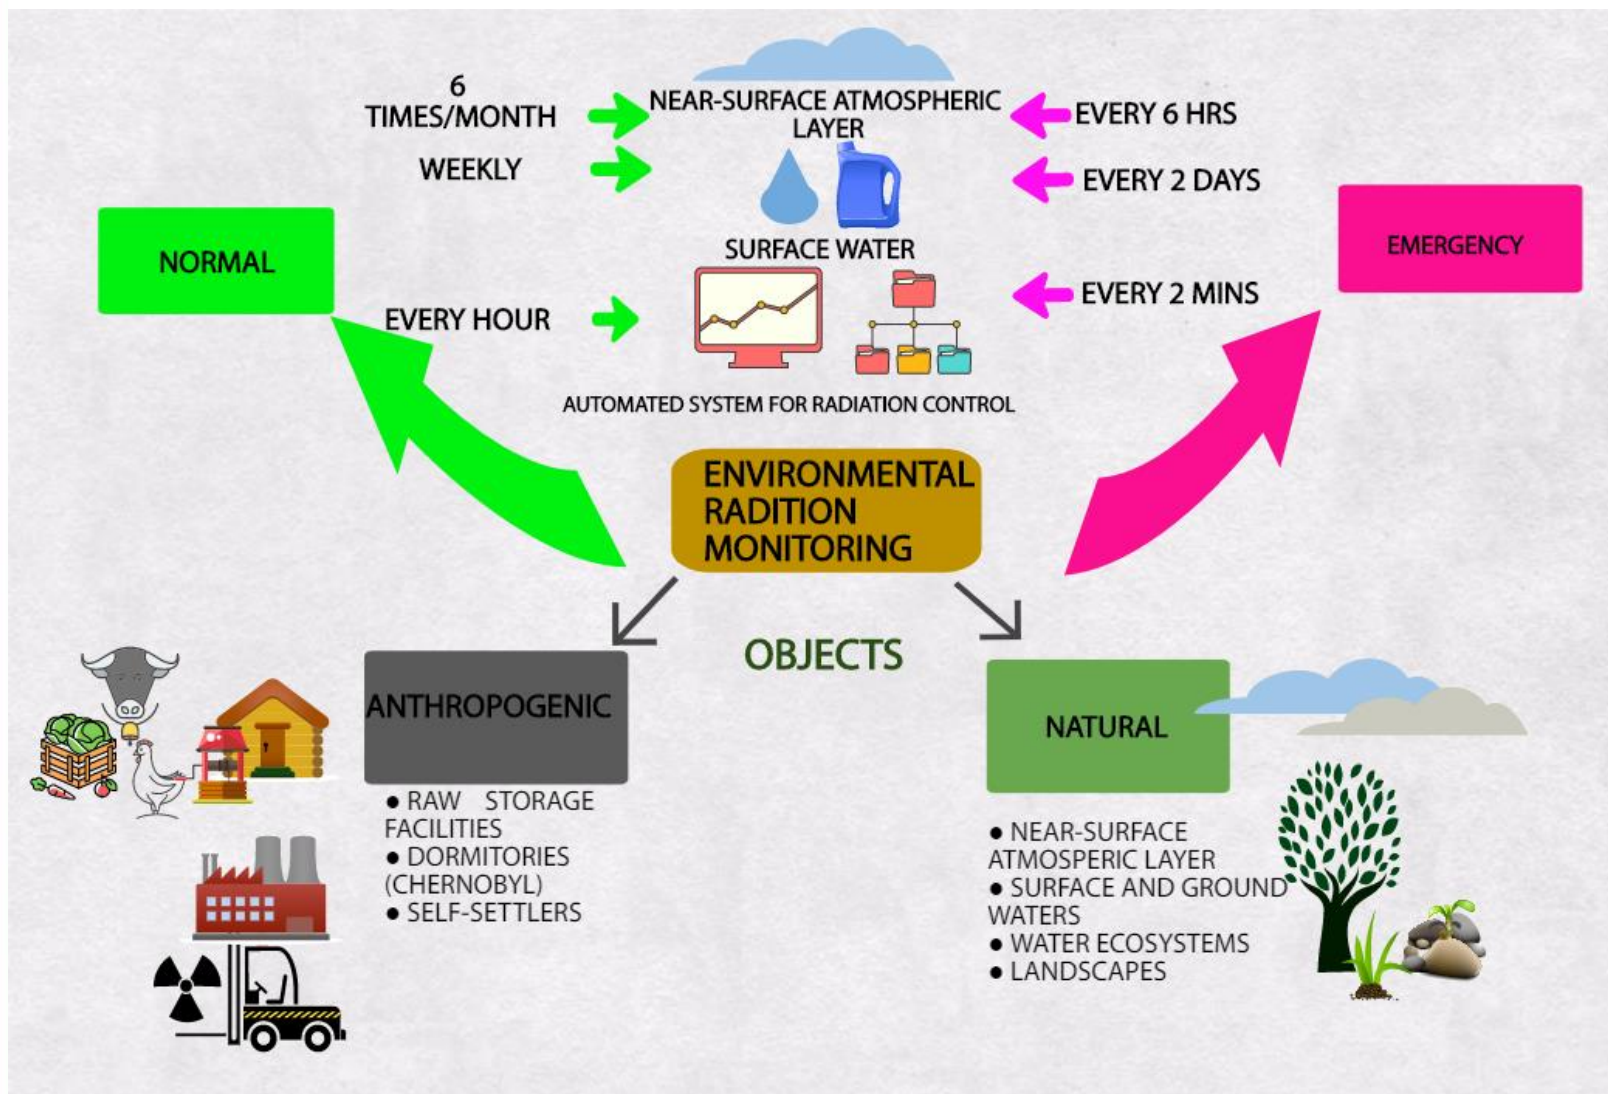

|                         |      |     |     |    |    |      |
|-------------------------|------|-----|-----|----|----|------|
| Grass (pasture-lands)   |      |     |     |    |    |      |
| Backyards               |      |     |     |    |    |      |
| TOTAL for self-settlers | 128  | 128 | 128 | 23 | 23 | 302  |
| Water biocenosis        |      |     |     |    |    |      |
| TOTAL                   | 4362 |     |     |    |    | 9839 |

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# Monitoring structure and modes

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# Monitoring capacity

## Surface Water

- 645 samplings;
- 1630 measurements

## Groundwater

- 138 boreholes;
- 2 water supply points;
- 680 samplings, 1100 measurements.

## Soil

- 1096 samplings
- 2944 measurements

# Monitoring capacity

## Air

- 9 stationary aspirating systems in the far field; 900 samplings, 1890 measurements per year
- 26 plates to collect the fallouts;
- 600 samplings, 1000 measurements per year

## Vegetation

- 213 samplings per year
- 394 measurements per year

# Components of monitoring

- Ongoing measurements
- Sampling and field measurements
- Laboratory measurements
- Data analysis & reporting

# Ongoing measurements

## Automated system for radiation control

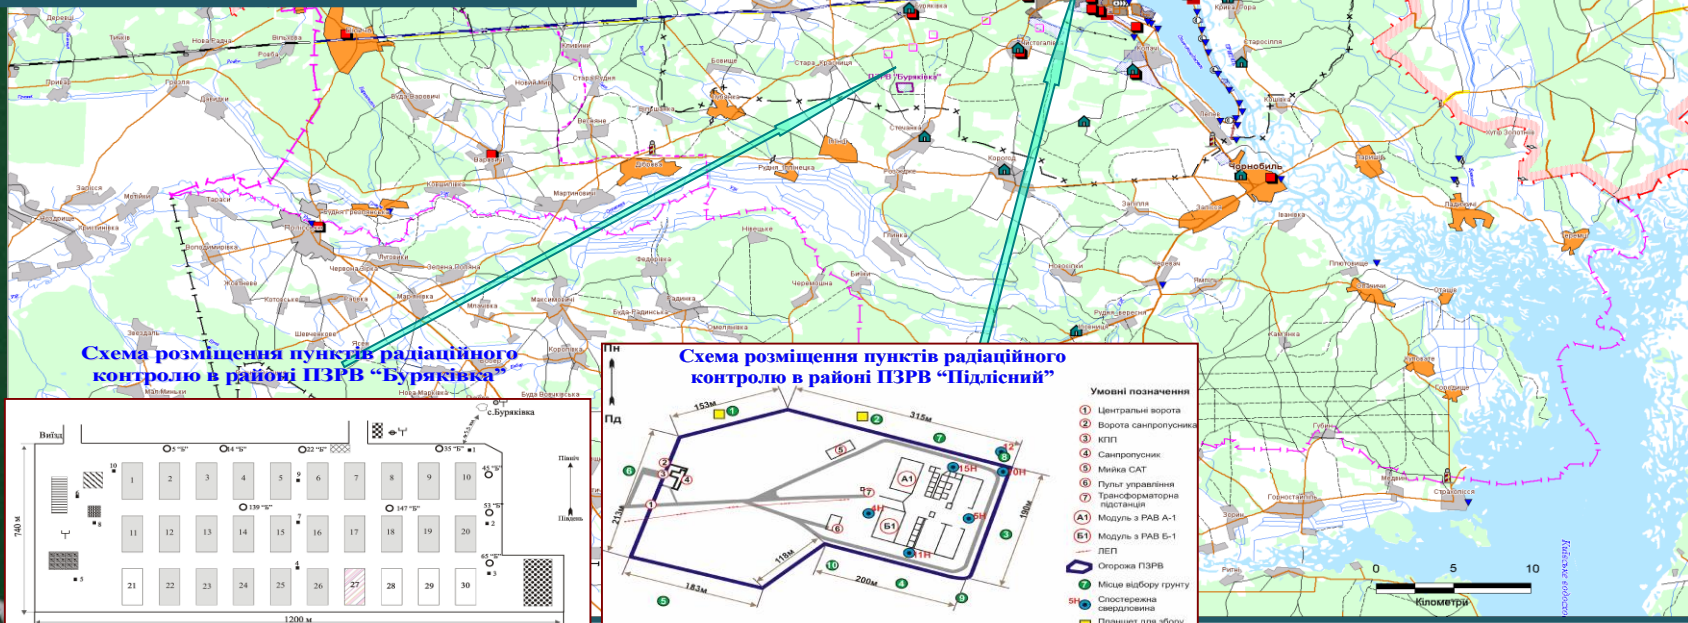

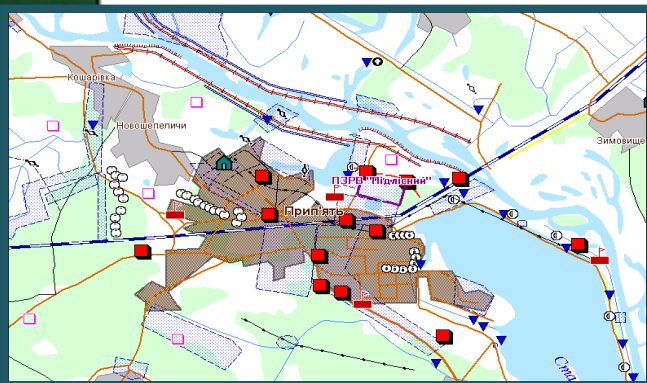

## System for non-proliferation control

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# Monitoring stations

# Automated system for radiation control and early warning

Dibrova Radiation Checkpoint

Real-time control room,

Dyatiatki Radiation Checkpoint

Paryshiv Radiation Checkpoint

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# Sampling

Air Sampling

Groundwater level measurement

Groundwater Sampling

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

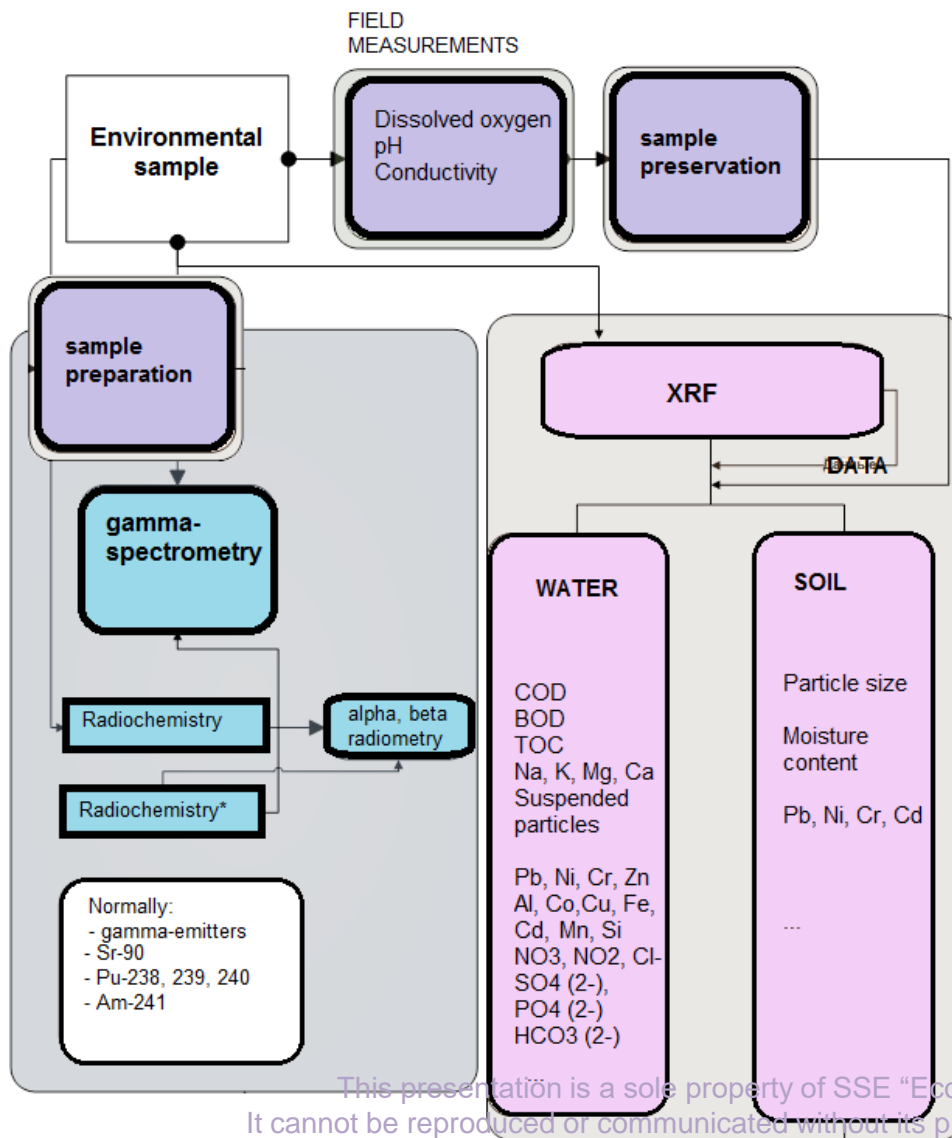

# Sample preparation\*

| Object            | Before sample preparation   | After sample preparation   |
|-------------------|---|--|
| GROUNDWATER       |   |   |
| VEGETATION        |   |   |
| WATER BIIOCENOSIS |  |  |

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# Laboratory measurements

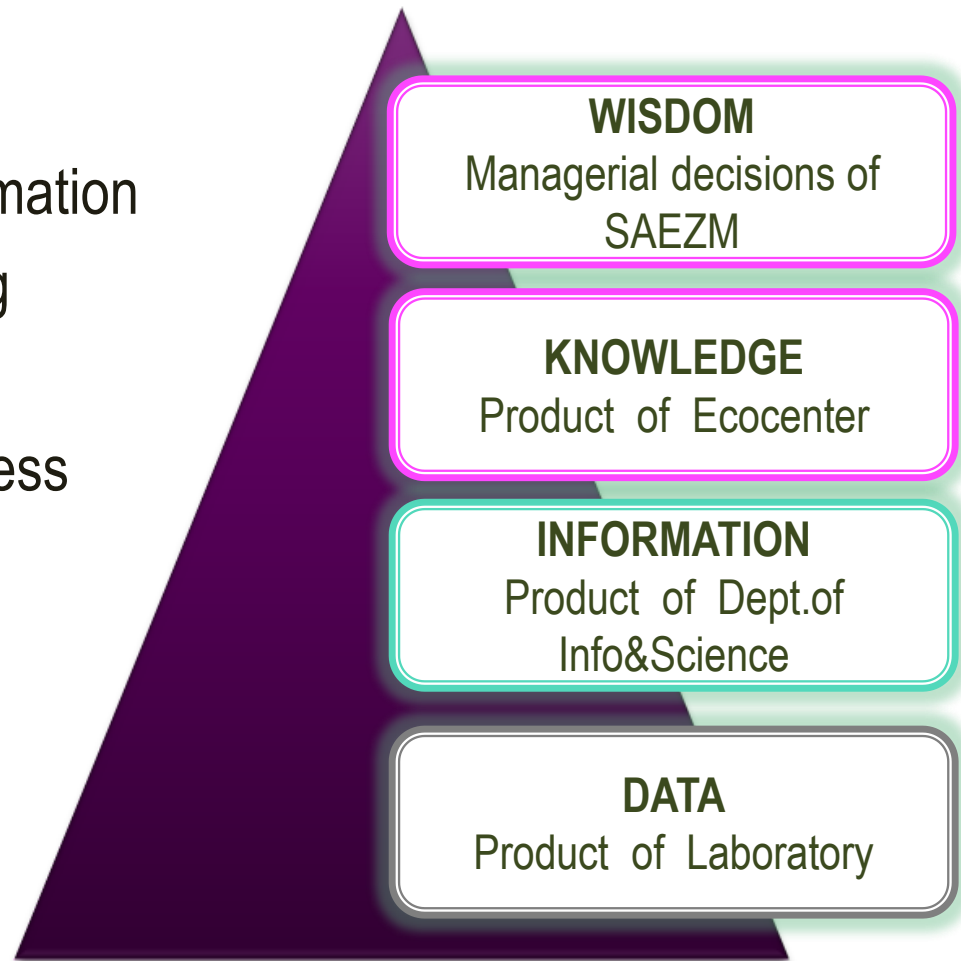

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# Data analysis

- Providing on-line information
- Modeling & prognosing
- Decision making
- Raising public awareness

**DEVELOPMENT OF NEW, PRACTICAL KNOWLEDGE = WHY TO MONITOR**

# What kind of knowledge can be created?

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

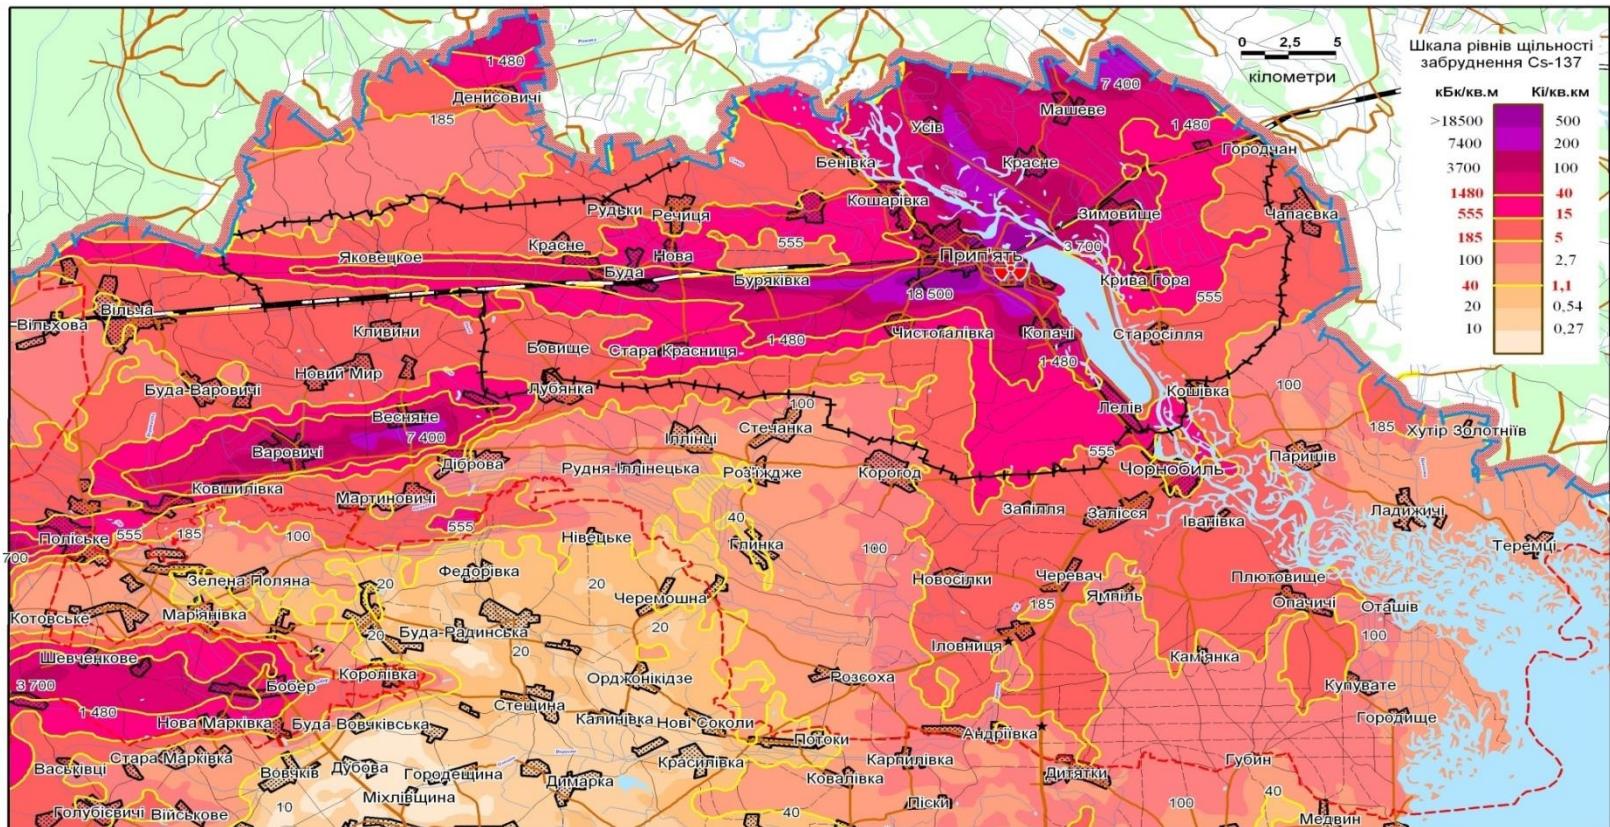

# 1. Data for Radiation Mapping

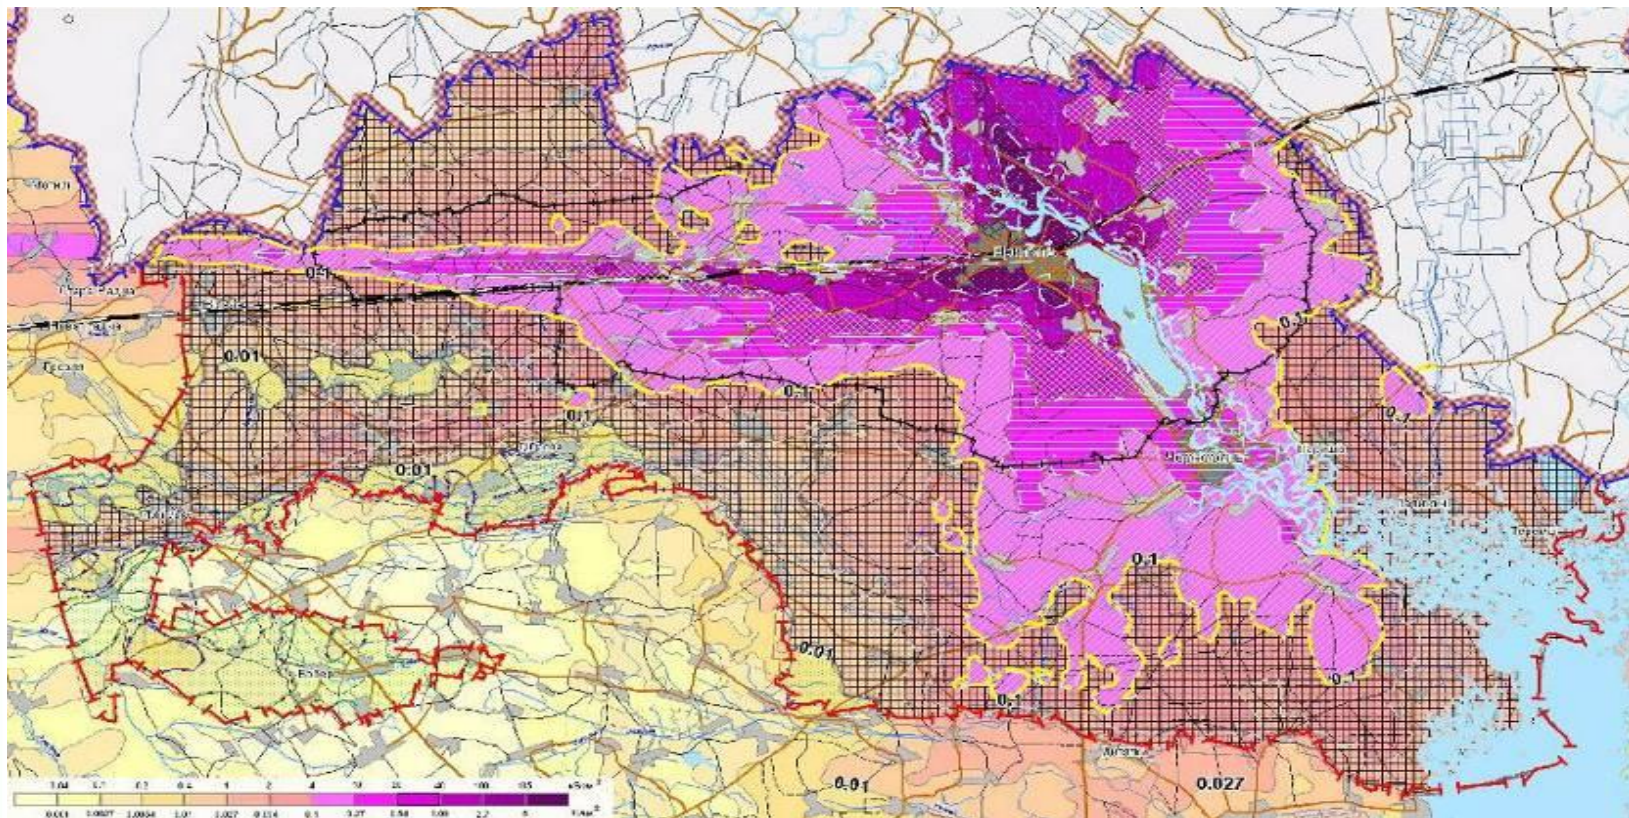

# Contamination of ChEZ by Cs-137

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

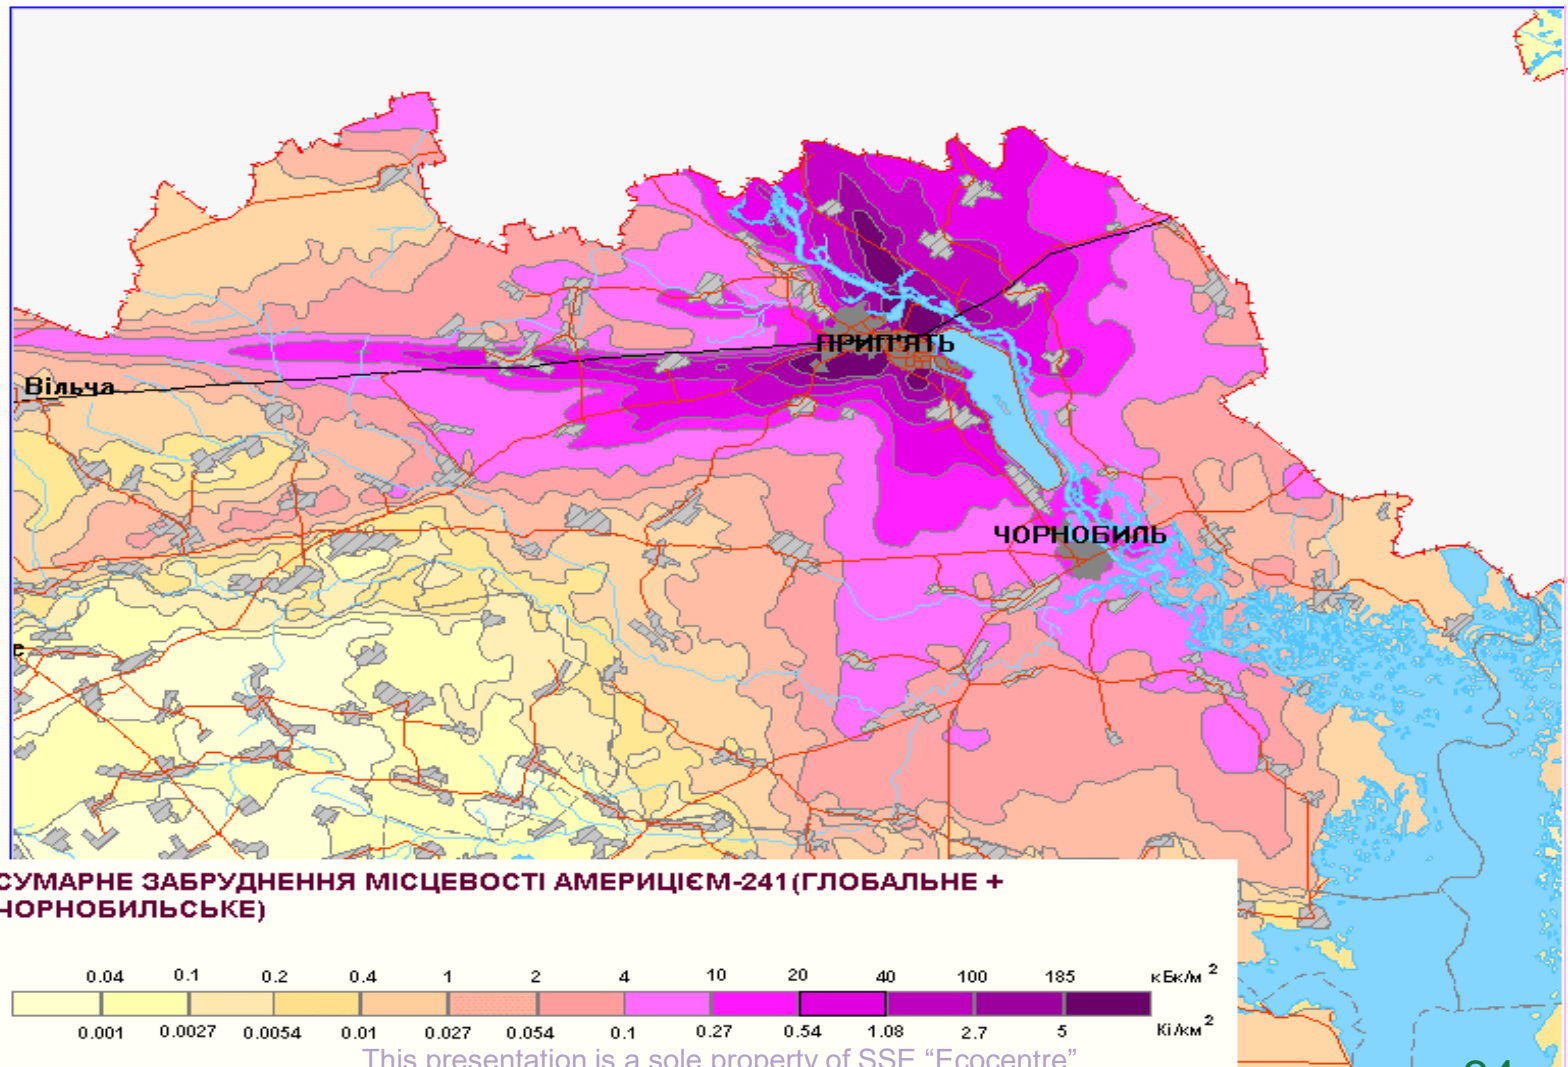

# Contamination of ChEZ by Pu isotopes

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# Predicted contamination of ChEZ by Am-241 in 2056

## 2. Assessment of RA contamination

# Balance of radioactivity in various objects of ChEZ

| Object                         | Activity, $\times 10^{15}$ Bq |                   |                  |             |
|--------------------------------|-------------------------------|-------------------|------------------|-------------|
|                                | TOTAL                         | $^{137}\text{Cs}$ | $^{90}\text{Sr}$ | TUE         |
| Territory of ChEZ              | 8.13                          | 5.5               | 2.5              | 0.13        |
| Cooling pond                   | 0.22                          | 0.19              | 0.03             | 0.002       |
| RAW Disposal facility          | 5.49                          | 3.6               | 1.8              | 0.09        |
| RAW Temporary storage facility | 2.14                          | 1.4               | 0.7              | 0.04        |
| <b>TOTAL</b>                   | <b>16</b>                     | <b>10.7</b>       | <b>5</b>         | <b>0.26</b> |
| The Shelter                    | 340                           | 190               | 145              | 4.5         |

# Contamination of products consumed by self-settlers (returnees)

| Product                 | Permissible activity of radionuclides, Bq/kg |                  | Excess contamination (times) |                  |
|-------------------------|--|------------------|------------------------------|------------------|
|                         | $^{137}\text{Cs}$                            | $^{90}\text{Sr}$ | $^{137}\text{Cs}$            | $^{90}\text{Sr}$ |
| Potatoes                | 60   | 20               | 8                            | 20               |
| Other vegetables        | 40   | 20               | 6                            | 140              |
| Fruit                   | 70   | 10               | 2                            | 18               |
| Fish from river Pripyat | 150  | 35               | 30                           | 12               |
| Fresh mushrooms         | 500  | 50               | 1000                         | 80               |
| Bush meat               | 400  | 40               | 220                          | 15               |

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

### **3. Risk Assessment and Safety Assurance**

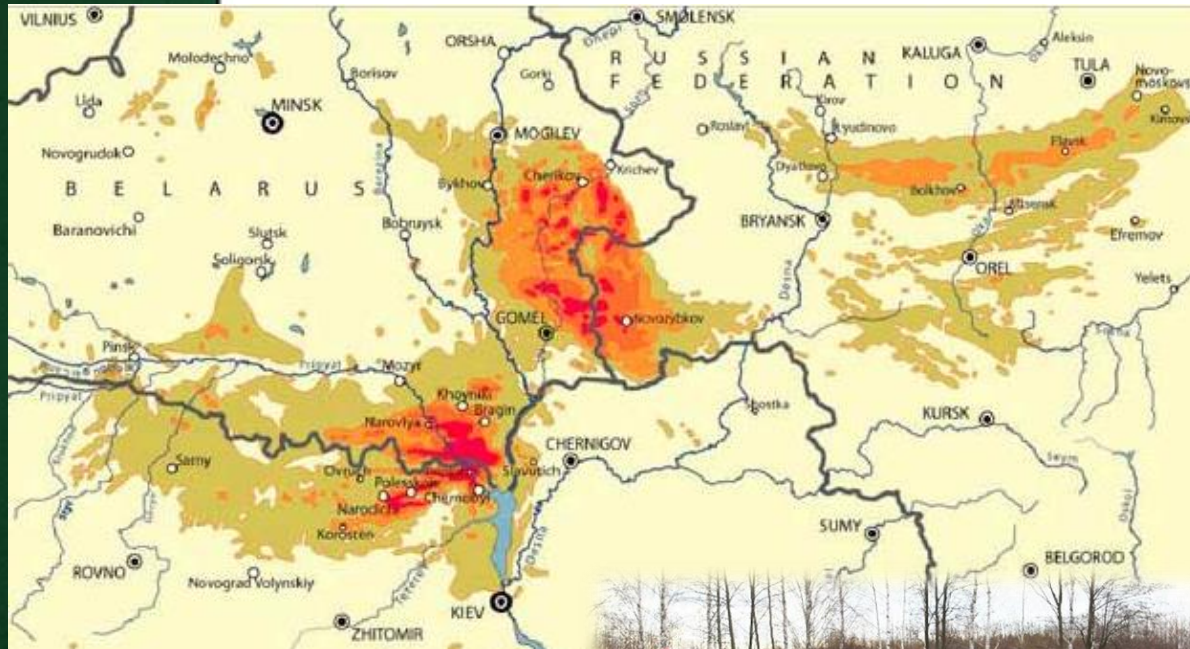

# Risk assessment

| Source of exposure                    | Max.individual dose, mSv/yr | Max. collective dose, man-mSv/yr | Probability, year <sup>(-1)</sup> | Index of radiation hazard, mSv/yr |
|---------------------------------------|-----------------------------|----------------------------------|-----------------------------------|-----------------------------------|
| Water transport of RN                 | 2                           | 250                              | 0.25                              | 62                                |
| Personnel exposure (routine work)     | 1.8                         | 25                               | 1.0                               | 25                                |
| Radiation accident at NSC             | 2000                        | 200                              | 0.01                              | 2                                 |
| Technogenic transport of RN           | 1.4                         | 1.2                              | 1.0                               | 1.2                               |
| Unauthorized food consumption in ChEZ | 25                          | 100                              | 0.01                              | 1.0                               |
| Air transport of RN                   | 0.2                         | 3.0                              | 0.2                               | 0.6                               |

## 4. Obtaining Information about Nuclear Incidents

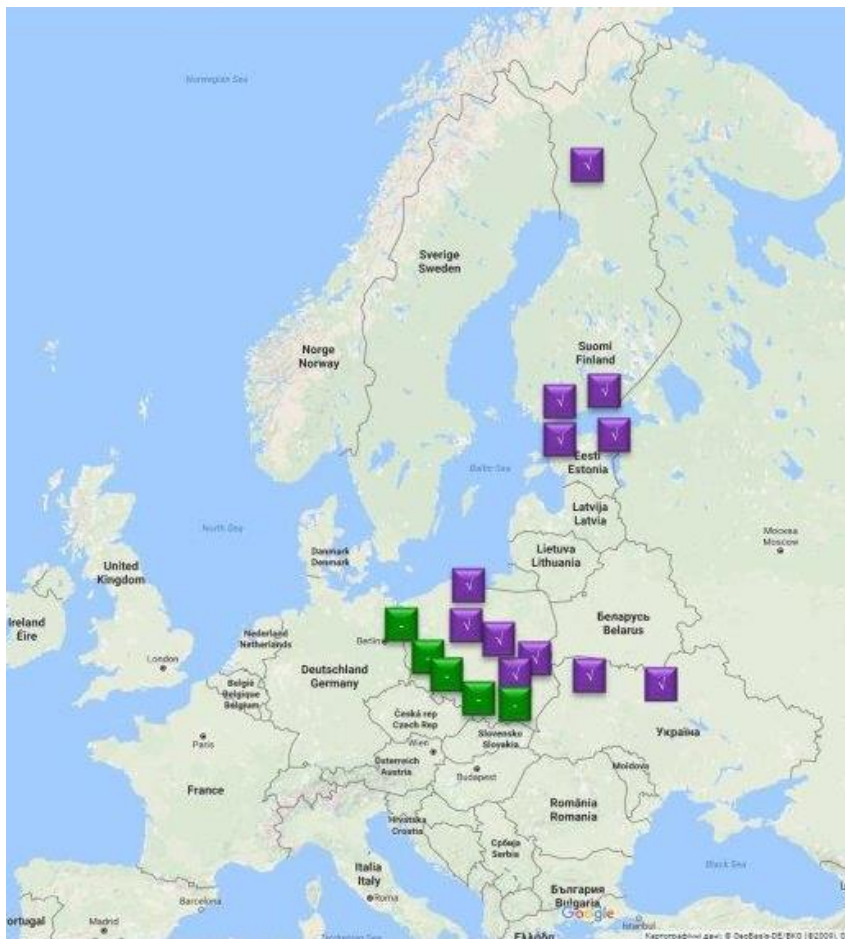

# Fukushima Accident in March, 2011

This presentation is a sole property of SSE "Ecocentre".  
It cannot be reproduced or communicated without its prior permission.

# Europe, October 2016

- I-131 detected in the near-surface atmospheric layer.
- 25th October: Norwegian Institute for Energy Technology reported a small leakage of radioactivity from Halden Research Reactor

# Conclusion

- ChEZ is an open area source of radiation with a specific distribution of radionuclides.
- Personnel working in ChEZ is exposed to a potential radiation risk.
- Environmental radiation monitoring is a complicated system involving considerable amount of resources.
- Environmental radiation monitoring is a vital part of radiation safety not only for EZ, but also for the whole country.
- Observing the trends is only one of the many tasks of the environmental radiation monitoring.
